Notes: Standard is manufactured on a glass fiber filter. These standards contain small (trace) quantities of radioactive material. These materials do not present a significant hazard due to direct toxic effects, but do present a small hazard due to radioactivity, especially if taken into the body. These samples are designed for use only in a radiochemistry facility experienced in the handling of radioactive materials. All appropriate precautions for the handling of radioactive materials should be in place at all times. Decay products for some of the radionuclides listed are also radioactive. These decay products are present in different stages of equilibrium with their parent nuclide and are not accounted for in the component listing.

Although not all of these radioisotopes are classified by official agencies (OSHA, NTP, IARC), all radioactive materials may increase the risk of cancer if improperly handled. Considered Non-Hazardous under OSHA 1910.1200 (HazCom) as product contains no known or potential carcinogens in excess of 0.1% of the composition nor any other hazardous chemical in excess of 1% of the composition.

Material Use: Analytical reagent or certified reference material used in laboratories. Uses also include research and development.
